

## HorseGuard LINE POST INSULATOR #8bl

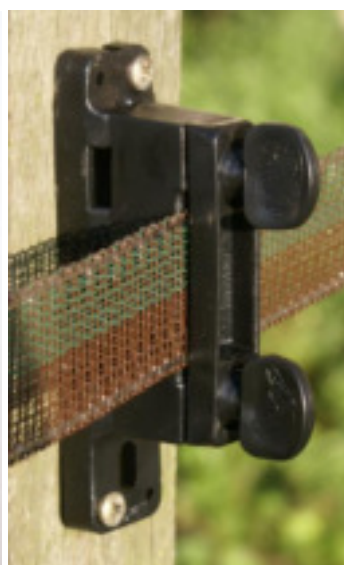

Sold only in black in Canada, this accessory is made for in-line posts without tension. Designed to avoid pinching the tape which could be cut over time by the strong winds.

#8bl

#8bl + #56T for metal posts

#8bl with 2 screws on wood

This insulator is designed to fit all kinds of posts, but the attachments are different for wooden, metal or tree posts:

- Wood screws #8X on **wooden post** (2 screws set diagonally are sufficient)
- Stainless Steel Wire ties #56T on **metal posts**
- Belt #BP150 on **tree line posts**

A tree acting as a post must be sufficiently large to stay stable in the wind to prevent the tape rubbing and causing undue wear.

#8bl + #BT150

- With precut holes at each end, the insulator slides onto 1/2 inch round **fiberglass stakes** **1.70m - 5.57ft - / diam. 12mm - 0.47"**..

#8bl + #7A

Once the insulator has been attached onto a line post, position the tape, close the cap, and screw in the bottom first.

Then screw in the other peg with care not to over tighten.

If you need extra screw pegs, a wheel of 14 rounded plastic screws #VN is available.
