

Installation Instructions: **ROUND PEN**

Working enclosures are typically designed with tape installed at one foot height intervals, but more can be added according to personal preference. First, a horse is trained to respect the fencing. Later, the fence can be switched off. An increased number of tape rows provides a superior visual barrier, to help keep horses settled in their enclosure and focused on their handlers.

Option 1

The insulator/small tensioner #45V is fixed to the inside of the round pen with wooden posts.

Option 2

Insulator # 8bl is attached to the outside of the round pen with metal stakes. **Contact of the tape with the stake should be avoided.** The tensioner # BP37 is used on each side of the gate for each row of tape. The 2 gate posts must be large.

5 Rows of Tape

Slightly flare the stakes outwards.

Ø 49.20 ft./15m. for pony use - 24 stakes

Ø 59 ft./18m. for small and medium size horses - 28 stakes

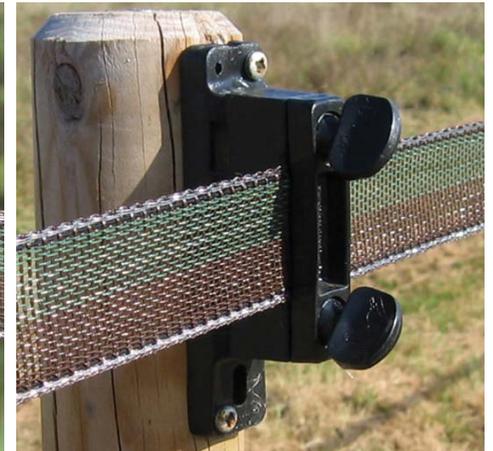

Ø 65.60 ft./20m. for use in sports stables or free-range work - 32 stakes

Ideal spacing between stakes: 6.7 ft./2.70m. Width of the gate: 5.7 ft./1.50 m.

Slightly flare the stakes outwards.

Option 1 #45V

Option 2 #8bl
