

Installation Instructions: **WHAT TYPE OF POST?**

Horseguard tape can be installed on any kind of post: wooden, metal T-Post, pipe metal post, fiberglass, Rebars, even Trees! Our Insulators and Tensioners are designed to fit them all.

Our Fiberglass post (5.6 ft. - Diameter 0.47 in.) is the only post sold on our online store. Wooden and metal posts must be purchased locally.

How to Install the Tension Posts

At the corners, at each end of the fence and at each side of the gates, the tension posts need to be strong as they take the major strain on the fencing. Wooden posts, T-post sets and metal pipes are all valid options for tension posts.

Additional concrete at the base of the post holes will reinforce posts for tension.
